

Omnivore: POS Integration Made Easy

Omnivore is dedicated to building a cloud-based API for restaurant POS systems. We provide restaurants, online services, and developers with a universal service to extend the capabilities of existing POS systems.

Founded in 2014, Omnivore combines CEO Mike Wior's experience in security and infrastructure at Wells Fargo with CTO Mike Taczak's experience in API platform development at Rackspace. Our staff also includes years of restaurant management and POS software development experience.

The Omnivore platform serves a range of customers including tablet ordering, mobile ordering, gifting, and mobile payment. Learn more at Omnivore.io
